

Andrew G Milmoe

Product Design

15+ years of experience giving engineers superpowers

Chicago Area/Hybrid • Text/Call 917-915-2338 • Andrew@Milmoe.com

Design leader translating academic and engineering prototypes into scalable, production-grade enterprise systems across multiple industries, partnering closely with domain engineers, software teams, and product leadership through periods of organizational and technical transition.

Selected Professional Experience

Lead UX Product Designer

Lake Forest, IL

(Remote)

Blue Origin is building a road to space for the benefit of Earth. Our team is focused on radically reducing the cost of access to space and harnessing its vast resources while mobilizing future generations to realize this mission.

Blue Origin builds reusable rocket engines, launch vehicles, in-space systems, and lunar landers.

Blue Origin, Inc.

2022 - 2024

- As the design lead for the test and flight operations time series database, I was initially tasked with enhancing the query builder. However, after UX research interviews with a broad spectrum of rocket engineers to understand their larger workflow I discovered inefficiencies in how they accessed their test results. By journey mappings these workflows, I guided product managers towards a more integrated “data insights pipeline” approach. **This cut the time between launches by several hours per engineer.** Engineers had streamlined access to their data through direct links between previously siloed applications.
- Blue Origin launched a sandboxed AI tool called BlueGPT. **I lead efforts to operationalize this AI tool to automate** the generation of RegEx queries, rapidly generate UI instructional copy, and explore enterprise-wide adoption.
- I engaged directly with rocket engineers by visiting test sites in person. While stakeholders understood business needs, they were not analyzing test outcomes on a daily basis. This approach **improved design insights, fostered trust and collaboration between teams, and led to higher-quality results.** Rocket engineering is difficult enough without additional cognitive load from hastily designed software.
- Leveraging years of experience in Agile/Lean Scrum teams, **I developed a design operations workflow that improved communications between UX and UI software engineers.** I took advantage of the internal BlueKit Figma design system web components to rapidly generate application designs to provide users with a more consistent experience. This approach accelerated the team velocity and new component contributions to the system.

Ontrak is a leading AI and telehealth-enabled healthcare company. They find and help thousands of people with unaddressed behavioral health conditions and chronic disease to improve their health and reduce medical expenses.

Ontrak, Inc.

2019 - 2021

- Integrated a secure messaging website with a telehealth HIPAA compliant video portal **from concept to launch in 60 days**, exceeding all expectations. Rapidly generated mid-fidelity clickable prototypes to align all stakeholders and guide engineering teams towards a cohesive user-centered experience.
- Aligned stakeholders around a clear model of the services front-line workers provide to members through a series of facilitated workshops, journey mapping, personas, and qualitative UX research. The model was used to outline requirements for a proposed Care Team Portal. This enabled us to make a confident platform purchase decision and **took weeks off our vendor's discovery process. The Portal reduces administrative tasks freeing up the Care Coaches to focus on members.**
- Designed a user-centered query builder to **put the Operations Team in direct control of revenue growth by reducing production process from days to real-time.** Mapped out the value stream to align stakeholders around the urgent need for a tool to **query AI insights.** Collaborated with a cross-functional agile team to drive the query builder from concept to operations through user-centered design process.

Sr Staff UX Interaction Designer
San Ramon and Pleasanton, CA

GE Digital is a leading industrial software company - transforming how their customers solve the toughest challenges by putting industrial data to work. They bring simplicity, speed, and scale to our customers' digital transformation with industrial software that delivers breakthrough business outcomes.

GE Digital

2013 - 2019

- **Led UX for an Industrial Internet of Things (IIoT) product that closed a \$180M 10-year service contract and doubled sales over two years.** With my UX research and subsequent prototypes I persuaded product management to pivot to a more direct solution. Visor enabled GE Power to provide service agreements that guarantee uptime and availability of mission critical power generation systems in offshore marine environments.
- **UX onsite research in four countries and off the coast of Louisiana,** rapid prototyping, and iteration with a cross-functional Agile team in multiple time zones. (US, EU, and India) Journey mapping, product roadmap hypothesis testing, user testing, interaction design, design system integration led to the creation of a new marine services product offering.
- Most senior UX individual contributor on both flagship GE Digital industrial internet applications from control room and dispatch to on-site in the field. Provided leadership and support through **integration of UX teams from GE Digital's two largest acquisitions.**
- Facilitated workshops and evolved design methods for use with prospective enterprise customers across multiple industries including automotive, manufacturing, IIoT, energy, and others.

Experience Design Lead
Chicago, IL
San Francisco & Oakland, CA

Coolaboratory is the name of my consulting business and the parent of the Make:SF meetup group.

Coolaboratory

2009 - 2026

- Evaluated visual designs to improve the output of a frontier AI model.
- Contract and consulting experience design to digital agencies including Razorfish, Sapient, Ruder Finn, AKQA and others.
- Interaction design at scales from wearable, mobile, tablet, conference video wall, control room, to indoor/outdoor architecture. (Private, team, presentation, monitoring, and public art use cases.)
- Product design & development from concept through functional prototype for HardTech startups at mHUB and Exploratorium Museum exhibit.

Tools

Figma, Aurelius, Asana, Jira, etc. Claude Code, Cursor, Perplexity, Photoshop, Arduino microcontroller programming, Rapid prototyping (3D modeling & printing, product hacking, hand and machine tools, composite molds and layup, laser cutters, etc.)

Academic Experience

Lecture Pool Instructor
University of California
Berkeley, CA
Summer 2017

Graduate course instructor for “Interactive Device Design” at the Jacobs Institute for Design Innovation in the School of Engineering. Students create connected Internet of Things devices from concept to business plans, video documentation, and working prototype.

Asst. Adjunct Professor
New York University
New York, NY
Fall Semesters 2003–2005

Professor of “Introduction to Physical Computing” at the Interactive Telecommunications Program, Tisch School of the Arts. Graduate course covering basic electronics, microcontroller programming, production of physical interfaces, experience and interaction design.

Guest Speaker
Make:SF Founder
Bay Area Maker Community

Public speaking on information architecture and physical computing:

- Device Design Day, Colorado College Inter-Disciplinary Arts
- NYU School of Continuing Education
- Pratt Institute Manhattan

Founder / workshop production for Maker “Meetup” of 3000 active members. Produced 200+ workshops to collaborate and present their work.

Education

Master of Professional Studies
New York, NY

New York University, Interactive Telecommunications Program
Physical computing focus

Bachelor of Fine Arts
Pittsburgh, PA

Carnegie Mellon University, Industrial Design with university honors
