Andrew G Milmoe Lead UX Product Designer

Chicago Area | 917-915-2338 | Andrew@Milmoe.com | www.linkedin.com/in/agmilmoe | www.milmoe.com

Strategic and insightful Lead UX Product Designer with over 20 years of experience leading human-centered design strategy for complex, mission-critical enterprise systems and leading-edge platforms. Proven track record of architecting innovative UX frameworks across the AI/ML, aerospace, industrial IoT, healthcare, and global energy verticals. Expert at translating in-depth research into actionable product strategies that accelerate software engineering velocity, reduce unplanned downtime, and directly drive top-line revenue growth.

SELECT CAREER HIGHLIGHTS

- **Aerospace Data Management** On-site research with ~30 rocket engineers revealed how widely the test and flight data lake was being worked around, reframing the roadmap from query optimization to an end-to-end data insights pipeline as the platform moved to supporting commercial aerospace manufacturing at rate.
- **Business Outcomes** Led 35 stakeholder field research across 4 countries that pivoted GE's Visor product strategy, directly enabling a $180M 10-year service contract and doubling sales within 2 years.
- **UX Design on a Global Scale** Sr. Staff UX Product Designer for GE Predix APM, guiding data visualization design strategy for monitoring systems protecting assets responsible for ~12% of the world's power supply.
- **Startup Velocity & Revenue Acceleration** Designed real-time AI querying tools that supported 135% YoY growth at Ontrak and identified bottlenecks that moved corporate revenue recognition forward by ~1 month.

CORE COMPETENCIES

- **Strategic Design Leadership** Enterprise Product Strategy | Field and Ethnographic Research | Stakeholder Alignment | Agile Workflows | Cross-Functional Leadership | Coaching and Mentorship
- **Complex Systems and AI** Frontier AI Model Evaluation | Agentic Workflows | Human-in-the-Loop Design | LLM and Data Science Team Collaboration | ITAR, HIPAA and Enterprise Security Compliance
- **Rapid Prototyping** Hardware/Software Integration | Embedded Computing | IIoT Ecosystems | Decision Support and Data-Rich Interfaces | Design System Contribution & Adoption
- **Software** Figma | Claude Code CLI | Vercel | GitHub | Perplexity | Aurelius | Miro | Mural | Notion | Asana | Rally | Jira | Confluence | Runway | Adobe Creative Suite | Arduino

PROFESSIONAL EXPERIENCE

Blue Origin, Inc. Remote 2022 to 2024

Private aerospace manufacturer and spaceflight services. Reusable rocket engines, launch vehicles, in-space systems, and lunar landers.

Lead UX Product Designer

Led design for the test and flight operations time-series data lake, replacing fragmented retrieval methods (spreadsheets, directory diving, siloed apps, and overnight manual file transfers) with a data insights pipeline that kept analysis inside the system without the need to move data. Grounded product strategy in on-site research with engineers to improve data analytics capability and decision-making velocity for mission-critical operations.

- Interviewed ~30 engineers on site, uncovering product adoption and UX issues invisible to the product team.
  - Converted UX research participants into adoption champions spreading uptake across ~2,000 engineers.
  - Redesigned the UI, pioneering the use of the BlueKit design system while contributing web components.
- Pivoted product strategy from optimizing the database query builder to focusing on the end-to-end workflow.
  - Spearheaded the resulting test and flight operations data insights pipeline, connecting previously siloed applications across the rocket component lifecycle, from design & testing through flight & maintenance.
- Designed and delivered a near-real-time launch data visualization tool within weeks, establishing the first non-intrusive method for subject matter experts to run live vs. historical comparative diagnostics.
  - Executed the prototype design and implementation operating one degree of separation from the Mission Control Network, preventing system stability risks while bolstering pre-launch and in-flight decision-making.
- Developed the team's foundational collaboration framework from scratch, integrating Figma design workflows into the Agile Jira/Scrum development process. Trained engineering teams on UX collaboration best practices.

Ontrak, Inc. Oakland, CA 2019 - 2021
Leading AI and telehealth-enabled healthcare company. Grew revenue 135% to $83.8M between 2019 and 2020.

Principal UX Product Designer

Senior IC on a 5-member team, owning end-to-end design for 2 of the company's 3 core software systems. Built and continually evolved the UX function to accelerate software development cycles in a high-growth startup environment.

- Mapped a complex health claims-to-enrollment value stream to build a shared member attrition model. The framework unified Operations, AI/ML, and Clinical teams, resulting in an org-wide rollout by the CTO.
  - Diagnosis revealed Operations submitting member segment requests to a research-oriented AI/ML team that routinely deprioritized them, leaving AI/ML as de facto gatekeepers of member data.
  - Removed the dependency by designing List Manager, a self-serve query tool allowing Operations to pull their own outreach segments, and scale through a year of 135% revenue growth.
  - Combined the model with the analytics team's metrics to design an executive dashboard, making stages and bottlenecks traversable; adopted by operations leadership as their OKR instrument.
- Designed & launched a HIPAA-compliant video telehealth portal in 60 days, 1 month before CEO deadline.
  - Built Ontrak's first branded web component library (precursor to its design system) in the same period.
- Led end-to-end UX research and scoping for a next-generation Care Team Portal, modernizing a 15+ year-old legacy system to support real-time clinical documentation for 700+ care coaches during member calls.
  - Conducted observational field research and journey mapping to define 32 core features and 45 use cases.
  - Navigated 'build-vs-buy' requirements across 4 divisions, accelerating platform selection by weeks.

GE Digital San Ramon, CA 2013 - 2019
Leading provider of IIoT software, asset performance management, and grid automation. Standalone $1.2B software business in 2019.

Sr. Staff UX Product Designer

UX Lead across flagship IIoT applications, promoted to the Predix Asset Performance Management team for large-scale power generation. Led the turnaround of a satellite-based diagnostic portal used to prevent $1M/day in unplanned downtime by replacing the proof-of-concept predecessor with a resilient commercial IIoT system.

- Spearheaded UX design of a time-series data visualization tool as the most senior IC on a 15-person team, designing monitoring and diagnostic systems for $1T in industrial assets including ~12% of global power generation capacity; efforts resulted in 2-3% fuel efficiency gains and $3M in annual savings per power plant.
- Interviewed 35 stakeholders across 4 countries in a field research project that pivoted the Visor Service Portal strategy, resulting in a $180M 10-year service contract and doubled sales in 2 years.
  - Accelerated roadmap delivery by 3 months. Reduced time-to-data from 8 hours to 15 minutes.
- Conducted ethnographic research aboard an offshore drill ship, interviewing 26 crew members to inform the two-year product roadmap for GE's marine power conversion business.
  - Delivered research-based insights with the potential to lower unproductive downtime on drill ships by 10%.
- Orchestrated UX team integration following 2 corporate acquisitions, onboarding 6 designers into GE Digital.
- Facilitated 12+ design & strategy workshops for prospective clients (Automotive, Energy, CPG, Manufacturing).

Coolaboratory Chicago, IL; San Francisco, CA; Oakland, CA 2009 to Present
Independent consulting practice and parent entity of the Make:SF meetup group.

Founder & Principal | Product Design Lead

- **UX/UI Design Quality Evaluation** (2026 - present) Assess UI/UX output (visual quality, continuity, clarity, prompt fidelity) from a frontier AI lab, uncovering design anomalies & artifacts characteristic of generated work.
- **Agentic Development Practice** (2025 - present) Design and ship production web applications using agentic coding tools (Claude Code CLI), working through Git branch strategy and staged deployment.
- **Hardware Startup Mentorship, mHUB** (2025 - 2026) Advised hardtech founders on applying UX practice without a designer on the team, covering direct customer research, user-centered product decisions, and business model feedback through community working sessions, workshops, and conferences.
- Founded and led Make:SF for over 10 years, growing to 3,000+ members and producing 200+ workshops.

TEACHING EXPERIENCE

Lecture Pool Instructor & Asst. Adjunct Professor | University of California, Berkeley & New York University (2003 - 2005, 2017) Instructed graduate-level IoT device design and physical computing.

EDUCATION

Master of Professional Studies, Interactive Telecommunications (Physical Computing) New York University
Bachelor of Fine Arts, Industrial Design (With Honors) Carnegie Mellon University
